To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Sirs,

We oppose the proposed additional monthly fee to be imposed on Rocky Mountain Power's net metering customers. Our eight rooftop solar panels produce in excess of 100% of our annual electric use, according to our monthly statements, yet we receive no compensation for the surplus power generated. Instead, we are being asked to pay a fee in addition to our regular monthly fees. This is a very clear signal that RMP is not interested in Utah becoming a leader in renewable energy production.

We are aware that there are issues regarding the timing of solar production versus peak customer demand; however, RMP could encourage new customers to orient solar panels more to the southwest in order to better match anticipated summertime peak usage.

Utah ought to be a leader in rooftop solar and renewable energy. The PSC should direct RMP to look for innovative ways to match distributed solar to anticipated loads, and reject its efforts to discourage our renewable future.

Sincerely,

Fred and Bessann Swanson
